WENZHOU YUAN

M.Math
Quantitative Research Intern

wenzhou.yuan@bodhiresearchgroup.com

Wenzhou Yuan is a first-year master's student studying financial mathematics at the University of Chicago. He obtained finance and mathematics degrees during his undergraduate study at Southern Methodist University. Not limited by traditional perceptions of finance, he also spent plenty of time exploring topics in new technologies, mathematical modeling, and computer science. He believes that in today's business world, analytical innovation is indispensable to financial applications and he would love to lever his expertise in developing new analytical ideas and excavating potential opportunities.

With a strong interest in numerical analysis and mathematical deduction, he has experience in solving problems both qualitatively and quantitatively. During his first internship at YieldChain Technologies, a Fintech company, he had the chance to expose himself in front of the most advanced financial technology and data science. Learning from multiple financial engineers and data analysts, he gained experience in using quantitative methods to make trading strategies and achieve insights into coding for financial services.

He encountered big data analysis during his third internship in an insurance company. Joining the actuarial team of the company, he found the power of gathering, sorting, selecting, and interpreting the right data, offered him a chance to gather unique insights in data analysis and visualization. During the internship, he learned the usage of database management and discerned the process of model development.
