

DR. SHUBEUR RAHMAN

Chief Scientific Officer

shubeur.rahman@bodhiresearchgroup.com

Dr. Shubeur Rahman is Chief Scientific Officer at Bodhi Research Group. He has a deep background in quantitative finance and risk management applied across the alternative investment universe, with a particular focus on hedge funds. In 2005, Dr. Rahman completed his PhD in physics at Cambridge University specializing in, what at the time, was the nascent field of quantum computing. He still maintains a strong interest in the space.

After switching careers to finance in 2008, Dr. Rahman first worked as a quantitative researcher at a billion-dollar plus systematic hedge fund in the UK during which he explored quantitative models for systematic trading, risk forecasting, and portfolio construction. From 2013, Dr. Rahman then worked as a risk manager for a sovereign wealth fund, Abu Dhabi Investment Council, where he set up the market risk modeling and monitoring infrastructure and performed investment due diligence across a number of mandates including hedge funds, public equities, and private markets.

In his spare time, Dr. Rahman enjoys travel and outdoor exploration through off-road driving, hiking, and cycling.
